

Astreya Deployment & Integration.

Configure and deploy your network and data center seamlessly

Today companies face specific technical requirements and challenges that they need to consider when building their network and data center to ensure it's high performing, scalable, and secure.

What should you do?

Configure your data center to improve the performance of your data center while mitigating risks and to ensure it is scalable to be able to meet the future needs of your data center as it grows.

70%

Of 1000 respondents had built new data center space or added space within the last five years.

Configure an effective data center to solve these defined pain points:

No proactive notification to customers related to a scheduled outage

Need for realtime incident management

Uptime measured against OLA and SLAs

Astreya's engineers expertly configure and prepare your network and data center for fast and seamless deployment.

Trained network and data center technicians are available to ensure all aspects of the deployment are properly executed.

Our solution includes:

Complete logistical management from ordering circuits and equipment to validating compliance with local municipalities

Rack, stack, wire, and power up by our trained experts to mount your gear based on the architecture design and check for functionality as expected

Network configuration

Verification and assurance of high-availability configuration through automated test scripts and/or on site smart hand technicians
